Efficacy of Homoeopathic Intervention in Sub Clinical Hypothyroidism with or without auto immune thyroiditis in Children

Optimal thyroid function for normal and development of children sub clinical hypothyroidism (SCH) and Auto immune thyroiditis are being increasingly identified in children.

Objective of this JC is to prove the efficacy of homoeopathic drugs in treating hypothyroidism in children.

A statistically significant decline in serum TSH value and anti TPO ab litres indicates that homoeopathic intervention has met only the potential to treat SCH with or without anti TPO ab but may also prevent progression to overt hypothyroidism.
